

Banana fungus

Fusarium TR4

oxysporum f.sp. *cubense*

One of the **greatest threats** to global **banana** and **plantain** production, the biological nature of this **soil-borne pathogen** (fungus) makes eradicating *Fusarium* TR4 technically unfeasible.

Prevention and **exclusion** are the **main way** to **stop the fungus** from spreading.

Help stop *Fusarium* TR4:

1. Make sure your **shoes** and **clothes** don't have **contaminated soil** on them when **visiting banana production areas**.
2. **Follow biosecurity rules** so you don't spread *Fusarium* TR4.
