

Banana fungus *Fusarium* TR4

oxysporum f.sp. *cubense*

One of the **greatest threats** to global **banana** and **plantain** production, the biological nature of this **soil-borne pathogen** (fungus) makes eradicating *Fusarium* TR4 technically unfeasible.

Prevention and exclusion are the **main way** to **stop the fungus from spreading**.

Help stop *Fusarium* TR4:

- 1. Prevention measures and contingency planning** are **crucial** in **delaying its spread** to new territories.
- 2. Once *Fusarium* TR4 is detected, immediate containment** through **appropriate biosecurity measures** is required.
- 3. Coordination** among **national and regional plant protection organizations, farmers and researchers**.
