International
Plant Protection
Convention

How can you protect your farm against Fusarium TR4?

What are the most common ways in which Fusarium TR4 can be transmitted?

-  By people through the movement of vehicles, tools and footwear
-  In contaminated soil, water and infected material
-  By root to root contact
-  By wildlife
-  From parent plants to suckers

What steps to take if you suspect Fusarium TR4 on your farm?

1. Mark suspect plant with flagging tape
2. Record location details of the plant
3. Take pictures or vidoes to help with identification
4. Restrict access to area with the suspect plant
5. Disinfect all tools and shoes worn in the area of suspect plant
6. Inform farm property owner who must call the national plant protection authority

If you suspect Fusarium TR4 to
be present on your farm contact
